Porcelain Floor Tile Maintenance

Correct maintenance of your floor is critical to its clean and lasting appearance. Incorrect cleaning agents and application may result in your deterioration faster.

Please follow these maintenance tips to keep your floor looking its best:

Your floor is a ceramic tile which has a non porous finish, so you want to treat your floor like cleaning glass, minimum water, fast dry.

You can walk across and put furniture on surface immediately.

Place, stick, nail felt or carpet to the base of all your moveable furniture. This will help reduce the wear and tear on your floor surface.

Avoid wearing shoes inside...socks are best

Sweep/vacuum/dustmop is fine - just be gentle

To clean your floor all you need to do is cleanse it.

Avoid using detergents or harsh products. E.g. bleaches, dish washing liquids etc

Detergents leave a residue behind, which **is** detergent, detergent's job is to attract dirt, so will make you floor dirtier quicker!!

Do use a cleansing agent such as a disinfectant, or better still use a pH neutral floor cleanser which is available from any cleaning product supplier.

If you have a hard mark on your floor use a cream cleanser & scour pad and **gently** remove.

Use warm water as a preference... The faster you can get your floor to dry the better.
